

XM satellite radio service is trying to change their service to become something they were never intended to be. XM is licensed by the FCC to be a NATIONAL service providing entertainment by satellite. The Commission's original purpose for creating XM and SIRIUS services was not to allow additional broadcast of local information. Local information is already thoroughly covered by terrestrial AM & FM stations. I write this in support of petition number 04-160 filed by the National Association of Broadcasters. Let XM do what they do best as a NATIONAL service. Let Local stations continue to do what they do best, which is local news and information.
